How the sensor works

Embedded photosensor and motion sensor into driver used for detecting brightness and motion to turn on/off the lamp automatically

The identification range for the sensor is **8M**, and we can set up following in our factory:

- The sufficient light: from **10 lux** to **50 lux**
- The holding time: from **35 seconds** to **2 minutes**

Application area

Hotel, living room, corridors, storage room, stairwells, etc.
